1 Amendments to the Specification

Add paragraph [0094] on page 6:

[0094] These definitions guide the accompanying claims:

The term "comprising" means consisting at least of.

The term "plurality" means two or more.

The term "data element" refers to an element which generally comprises a contents member; however, it is intended to cover cases where such contents member is logically, but not physically present.

While the term "simple contents" typically includes contents of types number, text, logic value, calendar date, time, time span, image or file reference, the term is intended to cover any kind of non-aggregate contents according to this method.

The term "store" means retaining data in all kinds of data storage means, including temporary storage means, like RAM, and persistent storage means, like hard disks.
